4K HDR **SE**

Limitless Power Processing

1 Second!

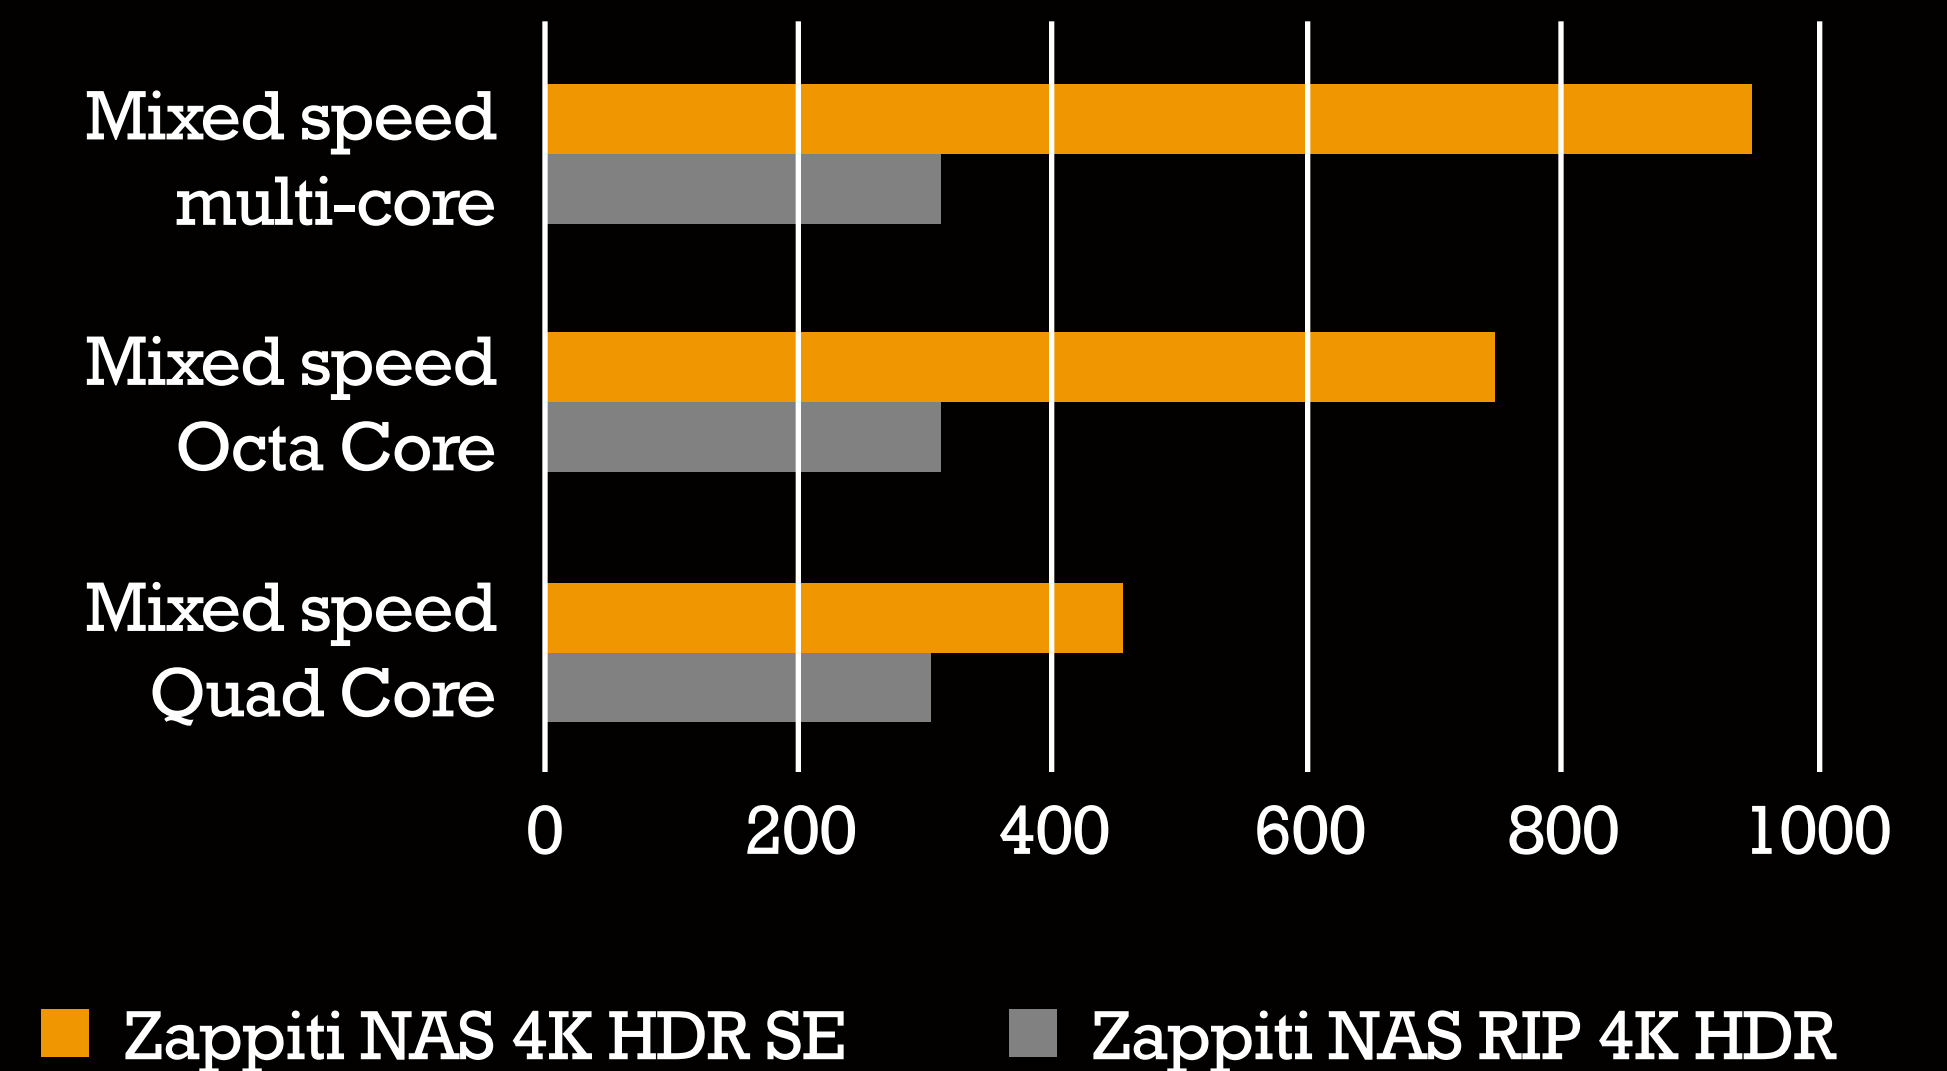

This is the time needed
for the new Zappiti NAS
SE 4K HDR processor to
run 5 billion operations!
(5064 Mbps)

Specifications

Performance Index

Extraordinary Durability

Utilizing a monoblock aluminum heatsink with a military grade voltage regulator and digital components, nothing was left to chance. The result is a system with extraordinary durability.

A GOLD Plus Certified Unit

The new Zappiti NAS SE power supply comes equipped with 80 PLUS GOLD Certification for exceptional assurance of stability even at full load, while preventing anomalies in current such as micro cuts. An energy efficiency of 92% has very low impact on the environment and your energy costs.

Intelligent Voltage Regulator

The voltage regulator module (VRM) Digi+, monitors voltage drops in real time and automatically modifies frequency and energy efficiency parameters. This results in increased performance and stability of the processor while reducing heat output.

VRM Digi+ is a copyright of Asus

M2 Storage

The internal drive for the new Zappiti NAS SE's operating system works in M2 format. The main advantage is full integration into the motherboard. Without traditional data link cables, the new module suppresses vibrations produced by the reader optics in the shifting phase, increasing the reliability of the module storage capacity while boosting performance up to 3500Mbps.

Audiophile Heaven

The new Zappiti NAS SE 4K HDR now offers optional full integration with Roon Core, a high quality, well-respected application of audiophiles around the world. Roon's server collects and identifies all local music files and HD music streaming services and delivers the content together in the same interface. With the Zappiti NAS SE and its high-protection RAID storage system (up to 140TB!), music collections and streaming services play seamlessly with GAPLESS performance, easily accessible via the Roon Server.
